

How to Prevent Automatic Updates in JAVA

When this is applicable: If you are taking or plan to take any Blackboard/WebCT courses, you should prevent your home computer from automatically updating JAVA. Blackboard/WebCT is not compatible with many versions of JAVA.

1. To prevent JAVA from automatically updating, go to **Start->Control Panel**

2. In the Control Panel, look for the **JAVA icon** and **right-click** to open it. It loads slowly so you will need to wait a minute or two.
3. Click the **Update** tab.

4. **Uncheck** the update box.

5. Click **OK**. JAVA will no longer update automatically.
